A Dark Night in Aurora - Dr. William H. Reid - 2018-07-24

James Holmes, who killed or wounded sixty people in a movie theater in Aurora, Colorado, only one man was allowed to record extensive interviews with the shooter. This is what he found. On July 20, 2012 in Aurora, Colorado, a man in dark body armor and a gas mask entered a midnight premiere of The Dark Knight Rises with a tactical shotgun, a high-capacity assault rifle, and a sidearm. He threw a canister of tear gas into the crowd and began firing. Soon twelve were dead and fifty-eight were wounded; young children and pregnant women were among them. The man was found calmly waiting at his car. He was detained without resistance. Unlike the Columbine, Newtown, San Bernardino, and Las Vegas shootings, James Holmes is unique among mass shooters in his willingness to be taken into custody alive. In the court case that followed, only Dr. William H. Reid, a distinguished forensic psychiatrist, would be allowed to record interviews with the defendant. Reid would read Holmes’ diary, investigate his phone calls and text messages, interview his family and acquaintances, speak to his victims, and review tens of thousands of pages of evidence and court testimony in an attempt to understand how a happy, seemingly normal child could become a killer. A Dark Night in Aurora uses the twenty-three hours of unredacted interview transcripts never seen by the public and Reid’s research to bring the reader inside the mind of a mass murderer. The result is chilling, gripping study of abnormal psychology and how a lovely boy named Jimmy became a killer.

The statistics are appalling. Between 8% and 10% of U.S. high school students carry guns to school every day. In a typical mid-size city, 30 to 50 cases of school violence are reported daily, and half of these cases involve guns. School Violence: Assessment, Treatment, Prevention shows us the reality behind the statistics. Its distinguished contributors include leading clinicians, researchers, school counselors, and legal authorities who closely examine every aspect of this complex epidemic, challenging us to solve this multifaceted public health problem and offering concrete recommendations on how to do it. The comprehensive volume is divided into four parts: Part I, Contributing Factors, presents the multiple contributing factors, including those involved in creating violent children and violence-prone schools, the nature and context of school violence, and its biological and cultural causes. For example, although the number of violent deaths by shooting in schools remained stable through the 1990s, the number of violent acts against female students increased significantly, as did gang activity and the availability of guns in schools. Part II, Assessment and Management, details diagnostic assessment, management, and treatment of children and adolescents who have the potential for or have threatened school violence. Eyewitnesses describe the shootings and their aftermaths in Pearl, Mississippi, and Littleton, Colorado, including the extensive measures taken to decrease the traumatic effect of these incidents on the children and adolescents and their families, the educators, and the community at large. Also presented is a model for time-limited, cognitive-behavioral group therapy for those who sustain or witness violent injuries in schools -- a model that could be adapted to other settings. Part III, Legal Aspects, begins by putting us on notice that anyone aware of a potentially violent act by a youth has a legal responsibility to alert the intended victim(s) and others who could warn or protect them, offering a uniquely insightful view -- by the plaintiff attorney for the victims of school violence in Paducah, Kentucky -- of the Tarasoff case and its ramifications. Part IV, Prevention, concludes with what we can do now to help prevent school violence, detailing effective preventive measures that range from the innovative (a method that focuses on the school as a whole rather than on individuals and uses a social system and power-dynamics perspective) to the everyday (teaching tolerance and conflict resolution). Psychiatric practitioners, clinical social workers, pediatrians, art and activity therapists, school counselors and administrators, and other educators and mental health care professionals -- and concerned adults -- who want to help prevent violence in our schools and minimize its traumatic effects on children, parents, and the community at large will appreciate this lucid, in-depth treatment of what has become one of today’s most disturbing issues.

Depression - Wendy Moragne - 2011-04-01

Depression is a mental health disorder that affects the lives of millions. Statistics from the World Health Organization show that about 121 million people worldwide are clinically depressed. The symptoms of depression go far beyond just feeling sad. It is a serious disorder that can make it difficult for sufferers to cope with daily life. At its worst, depression can lead to suicide. Major depression affects more than 5 percent of teens and is linked with suicide, substance abuse and other serious problems. Yet it often goes undiagnosed and untreated, explains USA TODAY, the Nation's No. 1 Newspaper. The good news is that available treatments such as antidepressants and psychotherapy can help most people with depression to lead normal, healthy lives. In this book, you'll follow the stories of five young people who suffer from depression. You'll learn about the causes, symptoms, and diagnosis of depression and discover coping strategies and available treatments. All of these facts will give you the information you need to recognize and understand depression and its treatment. Identifying depression in yourself, a friend, or a family member is the first step toward recovery.

Hidden Valley Road - Robert Kolker - 2020-04-07

#1 NEW YORK TIMES BESTSELLER • OPRAH’S BOOK CLUB PICK • ONE OF GQ’s TOP 50 BOOKS OF LITERARY JOURNALISM IN THE 21st CENTURY • The heartrending story of a midcentury American family with twelve children, six of them diagnosed with schizophrenia, that became science’s great hope in the quest to understand the disease. “Reads like a medical detective journey and sheds light on a topic so many of us face: mental illness.” —Oprah Winfrey Don and Mimi Galvin seemed to be living the American dream. After World War II, Don’s work with the Air Force brought them to Colorado, where their twelve children perfectly spanned the baby boom: the oldest born in 1945, the youngest in 1965. In those years, there was an established script for a family like the Galvins—ambition, hard work, upward mobility, domestic harmony—and they worked hard to play their parts. But behind the scenes was a different story: psychological breakdown, sudden shocking violence, hidden abuse. By the mid-1970s, six of the ten Galvin boys, one after another, were diagnosed as schizophrenic. How could all this happen to one family? What took place inside the house on Hidden Valley Road was so extraordinary that the Galvins became one of the first families to be studied by the National Institute of Mental Health. Their story offers a shadow history of the science of schizophrenia, from the era of institutionalization, lobotomy, and the schizophrenogenic mother to the search for genetic markers for the disease, always amid profound disagreements about the nature of the illness itself. And unbeknownst to the Galvins, samples of their DNA informed decades of genetic research that continues today, offering paths to treatment, prediction, and even eradication of the disease for future generations. With clarity and compassion, bestselling and award-winning author Robert Kolker uncovers one family’s unforgettable legacy of suffering, love, and hope.

Beyond Post-Traumatic Stress - Jean Scandlyn - 2017-07-05
When soldiers at Fort Carson were charged with a series of 14 murders, PTSD and other “invisible wounds of war” were thrown into the national spotlight. With these events as their starting point, Jean Scandlyn and Sarah Hautzinger argue for a new approach to combat stress and trauma, seeing them not just as individual medical pathologies but as fundamentally collective cultural phenomena. Their deep ethnographic research, including unusual access to affected soldiers at Fort Carson, also engaged an extended labyrinth of friends, family, communities, military culture, social services, bureaucracies, the media, and many other layers of society. Through this profound and moving book, they insist that invisible combat injuries are a social challenge demanding collective reconciliation with the post-9/11 wars.
