often lead to racialized and matter, the essays in Tokens of Exchange focus on China and its interactions with the West to historicize an economy of translation. Rejecting the familiar regional approach to non-Western societies, contributors contend that “national histories” and “world history” must be read with absolute attention to the types of epistemological translatability that have been constructed among the various languages and cultures in modern times. By studying the production and circulation of meaning as value in areas including history, religion, language, law, visual art, music, and pedagogy, essays consider exchanges between Jesuit and Protestant missionaries and the Chinese between the seventeenth and nineteenth centuries and focus on the interchanges occasioned by the spread of capitalism and imperialism. Concentrating on ideological reciprocity and nonreciprocity in science, medicine, and cultural pathologies, contributors also posit that such exchanges essentialized ideas about culture, sexuality, and nation. The collection turns to the role of language itself as a site of the universalization of knowledge in its contemplation of such processes as the invention of Basic English and the global teaching of the English language. By focusing on the moments wherein meaning-value is exchanged in the translation from one language to another, the essays highlight the circulation of the global in the local as they address the role played by historical translation in the universalizing processes of modernity and globalization. The collection will engage students and scholars of global cultural processes, Chinese studies, world history, literary studies, history of science, and anthropology, as well as cultural and postcolonial studies. Contributors. Jianhua Chen, Nancy Chen, Alexis Dudden Eastwood, Roger Hart, Larissa Heinrich, James Hevia, Andrew F. Jones, Wan Shun Eva Lam, Lydia H. Liu,

What does the transnational circulation mean for its reception back home? Exploring the international life of a particularly long-lived and widely traveled book, Isabel Hofmeyr follows The Pilgrim's Progress as it circulates through multiple contexts—and into some 200 languages—focusing on Africa, where 80 of the translations occurred. This feat of literary history is based on intensive research that criss-crossed among London, Georgia, Kingston, Bedford (John Bunyan's hometown), and much of sub-Saharan Africa. Finely written and unusually wide-ranging, it accounts for how The Pilgrim's Progress traveled abroad with the Protestant mission movement, was adapted and reworked by the societies into which it traveled, and, finally, how its circulation throughout the empire affected Bunyan's standing back in England. The result is a new intellectual

**Evidence-Based Strategies for Effective Classroom Management** - David M. Hulac - 2017

Classroom management is critical to successful teaching, but many K-12 teachers struggle with it. This indispensable guide distills the best classroom management science into easy-to-implement strategies teachers can use to promote a productive and safe learning environment. Chapters provide evidence-based guidelines for implementing classwide prevention strategies, token economies, group contingencies, and self-management interventions. Procedures for evaluating intervention effectiveness and individualizing interventions are described. Reproducible tools include 9 forms and 21 quick-reference "coach cards"

each strategy. The large-size format and lay-flat binding facilitate photocopying; purchasers also get access to a Web page where they can download and print the reproducible materials. This book is in The Guilford Practical Intervention in the Schools Series.

Widely regarded as the authoritative work on the principles and practice of applied behavior analysis (ABA), this indispensable volume is now in a revised and expanded second edition. Leading experts present evidence-based procedures for supporting positive behaviors and reducing problem behaviors with children and adults in diverse contexts. Chapters delve into applications in education, autism treatment, addictions, behavioral pediatrics, and everything from behavioral assessment and measurement to the design and implementation of individualized interventions, the Handbook is a complete reference and training tool for ABA practitioners and students. New to This Edition

- Incorporates key advances in research, theory, and clinical practice.
- Chapters on additional applications: school consultation, pediatric feeding disorders, and telehealth services.
- Chapters on quantitative analysis of behavior (matching and behavioral momentum theory) and behavioral economics.
- Updated discussions of professional issues, ABA certification, and technology tools.

**Human Intelligence** - J. McVicker Hunt - 2020-03-12

What determines human intelligence? What is its relationship to creativity? Its potential for change? To illuminate some of these questions, J. McVicker Hunt has gathered together a number of essays. This volume contains some of the answers that have been found, but emphasizes that we still need to learn a great deal about developing ways to assess our human resources. We remain, for example, uncertain about what abilities pinpoint intelligence, and the extent to which intellectual ability can predict classroom success—even the ability to perform a job well. Articles in this book show that indications of heritability have nothing to say about the educability of individuals or classes—or races. Investigations indicate that there is a great deal more plasticity in the development of behavior and abilities than was presumed by those who believe in predetermined intelligence. They also

Articles in this book show that indications of heritability have nothing to say about the educability of individuals or classes—races. Investigations indicate that there is a great deal more plasticity in the development of behavior and abilities than was presumed by those who believe in predetermined intelligence. They also indicate that knowledge and ability both grow during the early years; knowledge grows throughout life: but the ability to acquire new knowledge and skill declines over time.

These areas of developing knowledge are of political as well as social significance. Any attempts to upgrade the abilities of the poor or the disadvantaged must necessarily be concerned with manipulation of the environment. These articles represent the most advanced available information about the relationship of experience, environment and heredity to the development of measurable intelligence.

Modeling Economic Growth in Contemporary Belarus - Bruno S. Sergi - 2019-11-08
Since 1991, the eyes of the world have been on the economic growth and development of the states that formerly made up the Soviet Union. Looking at Belarus’s industrial structure, economic growth, and economic prospects, this edited collection analyses why Belarus is considered ahead of many of its neighbour states in terms of human development.

Behaviour management in the classroom can be one of the most challenging aspects of teaching, but with the right approach it can be rewarding and enriching for both student and teacher. The new edition of this best selling textbook provides a systematic and thoroughly updated overview of the major theories and styles of discipline in schools. Distributed Energy Resources
technologies considered, the Systems: Optimal Operation and Planning reviews research and policy developments surrounding the optimal operation and planning of DER in the context of local integrated energy systems in the presence of multiple energy carriers, vectors and multi-objective requirements. This assessment is carried out by analyzing impacts and benefits at local levels, and in distribution networks and larger systems. These frameworks represent valid tools to provide support in the decision-making process for DER operation and planning. Uncertainties of RES generation and loads in optimal DER scheduling are addressed, along with energy trading and blockchain technologies. Interactions among various energy carriers in local energy systems are investigated in scalable and flexible optimization models for adaptation to a number of real contexts thanks to the wide variety of generation, conversion and storage exploitation of demand side flexibility, emerging technologies, and through the general mathematical formulations established. Integrates multi-energy DER, including electrical and thermal distributed generation, demand response, electric vehicles, storage and RES in the context of local integrated energy systems Fosters the integration of DER in the electricity markets through the concepts of DER aggregation Addresses the challenges of emerging paradigms as energy communities and energy blockchain applications in the current and future energy landscape Proposes operation optimization models and methods through multi-objective approaches for fostering short- and long-run sustainability of local energy systems Assesses and models the uncertainties of renewable resources and intermittent loads in the short-term decision-making process for smart decentralized energy systems

Today the cemented joint prosthesis operation is one of the most frequent procedures in orthopaedic surgery. During the past 30 years the individual steps of such an operation have been carefully validated and thus allow for a reproducible and standardized operation, including a reliable prognosis for the maintenance of the joint. This manual is a practical guide to a complication preventing cementing technique, cement fixation, maintenance of the bone and diamond technique. Clear drawings and diagrams guide the reader through the pre-operative, peri-operative and post-operative steps. The manual covers all possible complications and gives clear instructions, so as to prevent complications but also to cope with them if they occur. Finally, it covers all forensic criteria to be considered.
This is the second edition of the book Token Economy originally published in June 2019. The basic structure of this second edition is the same as the first edition, with slightly updated content of existing chapters and four additional chapters: "User-Centric Identities," "Privacy Tokens," "Lending Tokens," and How to Design a Token System and more focus on the Web3. //Part one outlines the fundamental building blocks of the Web3, including the role of cryptography and user-centric digital identities. Part two explains Web3 applications like smart contracts, DAOs & tokens. The last two parts of the book focus on tokens as the atomic unit of the Web3, explaining the properties and functions of money and outlining the emerging field of decentralized finance (DeFi) that might power a potential future digital barter economy. Use cases such as asset tokens, purpose driven tokens, BAT (Basic Attention (Steemit, Hive and Reddit), privacy tokens, and stable tokens are explored, including the role of CBDCs (Central Bank Digital Currencies) and Facebook's Libra. //Tokens - often referred to as cryptocurrencies - can represent anything from an asset to an access right, such as gold, diamonds, a fraction of a Picasso painting or an entry ticket to a concert. Tokens could also be used to reward social media contributions, incentivize the reduction of CO2 emissions, or even ones attention for watching an ad. While it has become easy to create a token, which is collectively managed by a public Web3 infrastructure like a blockchain network, the understanding of how to apply these tokens is still vague. **Communications and Multimedia Security** - Bart De Decker - 2010-05-20
This book constitutes the refereed proceedings of the 11th IFIP TC 6/TC 11 International Conference on Communications and Multimedia Security, CMS 2006, held in Linz, Austria, in May/June 2010. The 23 revised full papers presented were carefully reviewed and selected from 55 submissions. The papers are organized in topical sections on WiFi and RF security; XML and web services security; watermarking and multimedia security; analysis and detection of malicious code and risk management; VoIP security; biometrics; applied cryptography; and secure communications.

Innovative as it is, the blockchain technology is
Innovative as it is, the blockchain technology is getting more and more attention and an increasing number of applications have emerged. This book elaborates on both the design thinking ideas and technical details in blockchain and smart contracts to help readers delve into the conceptual framework and understand why blockchain is designed as such and how it makes the current system decentralised yet effective. Having this understanding lays the ground for further analysis of blockchain-based solutions and innovative fintech applications. Topics covered in this book include blockchain structure, blockchain ecosystem, design thinking for blockchain, smart contract, fintech and financial services, solution-based problem solving, fintech valuation, and current issues faced such as privacy protection and solution selection, with the aid of real-life examples and hands-on exercises. Blockchain and Smart Contracts serves as a valuable guide for researchers and practitioners who have interests in the blockchain, innovation and applications, design thinking, and technical details. This book is particularly written for anyone who has no technical background and is searching for an initiation into the deep end of blockchain. Those with business, finance and economic interests will find this interesting and easy to digest.

Behavior Analysis - Wayne W. Fisher - 2011-07-06
Describing the state of the science of applied behavior analysis (ABA), this comprehensive handbook provides detailed information about theory, research, and intervention. The contributors are leading ABA authorities who present best practices in behavioral assessment and demonstrate evidence-based strategies for supporting positive behaviors and reducing problem behaviors. Conceptual, empirical, and procedural building blocks of ABA are reviewed and specific applications described in education, autism treatment, safety skills for children, and other areas. The volume also addresses crucial professional and ethical issues, making it a complete reference and training tool for ABA practitioners and students.

The Exchange University - Adrienne S. Chan - 2009-07-01
The Exchange University addresses crucial questions facing today's university, including the commercialization of research and teaching; intensifying government-university relationships; marketization and commodification; and policy and functional responses within the academy. The book will interest practitioners, students, and academics in educational studies, policy studies, and higher education.

This extension followed the demand for self-stabilization in various areas of distributed computing including peer-to-peer networks, wireless sensor networks, mobile ad-hoc networks, robotic networks. To reflect this change, the name of the symposium changed to the International Symposium on Stabilization, Safety, and Security of Distributed Systems (SSS). This year we received 43 submissions from 13 countries. Most submissions were from the USA and France. Each submission was carefully reviewed by three to six Program Committee members with the help of external reviewers. For the first time a rebuttal phase allowed the authors to react to the reviews before the discussion of the paper within the Program Committee.

But developing these new systems brings its own host of problems. This expanded second edition takes a holistic view of topics that you need to consider when building, managing, and scaling microservices architectures. Through clear examples and practical advice, author Sam Newman gives everyone from architects and developers to testers and IT operators a firm grounding in the concepts. You'll dive into the latest solutions for modeling, integrating, testing, deploying, and monitoring your own autonomous services. Real-world cases reveal how organizations today manage to get the most

**Financial Cryptography and Data Security. FC 2021 International Workshops** - Matthew Bernhard - 2021-09-16
This book constitutes the refereed proceedings of four workshops held at the 25th International Conference on Financial Cryptography and Data Security, FC 2021, held virtually, in March 2021. The workshops are as follows:

**Dependable Systems: Software, Computing, Networks** - Juerg Kohlas -
Modern civilization relies on a functioning information infrastructure. As a result, dependability has become a central issue in all disciplines of systems engineering and software architecture. Theories, methods and tools that help to master the problems encountered in the design process and the management of operations are therefore of utmost importance for the future of information and communication technology.

The present volume documents the results of a research program on Dependable Information and Communication Systems (DICS). The members of the project met in two workshops organized by the Hasler Foundation. This state-of-the-art survey contains 3 overview articles identifying major issues of dependability and presenting the latest solutions, as well as 10 carefully selected and revised papers depicting the research results originating from those workshops. The first workshop took place in Münchenwiler, Switzerland, in March 2004, and the second workshop, which marked the conclusion of the projects, in Löwenberg, Switzerland, in October 2005. The papers are organized in topical sections on surveys, dependable software, dependable computing, and dependable networks.

**Advances in Usability, User Experience, Wearable and Assistive Technology**
Tareq Ahram - 2020-07-01
This book addresses emerging issues in usability, interface design, human–computer interaction, user experience and assistive technology. It highlights research aimed at understanding human interactions with products, services and systems and focuses on finding effective approaches for improving the user experience. It also discusses key issues in designing and providing assistive devices and services for individuals with disabilities or impairment, offering them support with mobility, communication, positioning, environmental control and daily living. The book covers modeling as well as innovative design concepts, with a special emphasis on user-centered design, and design for specific populations, particularly the elderly. Further topics include virtual reality, digital environments, gaming, heuristic evaluation and forms of device interface feedback (e.g. visual and haptic). Based on the AHFE 2020 Virtual Conference on Usability and User Experience, the AHFE 2020 Virtual Conference on Human Factors and Assistive Technology, the AHFE Virtual Conference on Human Factors and Wearable
control and daily living. The 2020 Virtual Conference on Virtual Environments and Game Design, held on July 16–20, 2020, it provides academics and professionals with an extensive source of information and a timely guide to tools, applications and future challenges in these fields.

**Monetary Problems and Reforms** - Charles Herbert Swan - 1897
Child psychology is a constantly expanding field, with dozens of specialized journals devoted to major disorders springing up in recent years. With so much information available – and the prospect of overload inevitable – researchers and clinicians alike need to navigate the knowledge base with as much confidence as they do the nuances of diagnosis and their young clients’ complex social, emotional, and developmental worlds. Treating Childhood Psychopathology and Developmental Disabilities fills this need by summarizing and critiquing evidence-based treatment methods for pediatric patients from infancy through adolescence. After a concise history of evidence-based treatment, legal/ethical issues involved in working with young people, well-known professors, practitioners, and researchers present the latest data in key areas of interest, including: (1) Cognitive-behavioral therapy and applied behavior analysis. (2) The effects of parenting in treatment outcomes. (3) Interventions for major childhood pathologies, including ADHD, PTSD, phobias, anxiety, depression, bipolar disorder, and conduct disorder. (4) Interventions for autistic spectrum disorders and self-injuring behaviors. (5) Techniques for improving communication, language, and literacy in children with developmental disabilities. (6) Treatments for feeding and eating disorders. This comprehensive volume is an essential resource for the researcher’s library and the clinician’s desk as well as a dependable text for graduate and postgraduate courses in clinical child, developmental, and school psychology. (A companion volume, Assessing Childhood Psychopathology...

Pediatric Neuropsychiatry -
C. Edward Coffey - 2006
Pediatric Neuropsychiatry provides the most updated and clinically relevant information on psychiatric disorders in children and adolescents with disturbances of brain function. Bridging the fields of psychiatry and neurology, this landmark work emphasizes the link between developmental brain biology and behavior. Major sections focus on neuropsychiatric aspects of specific psychiatric and neurologic disorders, highlighting the influence of the developing nervous system on these disorders' pathophysiology, manifestations, clinical course, treatment, and prognosis. Other sections discuss all contemporary diagnostic and therapeutic modalities. Chapters include case histories, algorithms, tables, and appendices that explain the rudiments of testing.

**The Species Problem**
David N. Stamos - 2003-03-17
Stamos squarely confronts the problem of determining what a biological species is, whether species are real, and the nature of their reality. He critically considers the evolution of the major contemporary views of species and also offers his own solution to the species problem.

**The Foundations of Islamic Political Economy**
- Masudul Alam Choudhury - 2016-07-27
This rigorously written book on the areas of Islamic principle theory and application is expected to break new ground in modern economic analysis, both for the Islamically inclined and others. The main features of the book include analytical treatments of the essential axioms and instruments of Islamic Political Economy, their expected application, and a comparative perspective both in respect to contemporary Islamic literature as well as comparative economic theory.

**Ranking, Resource and Exchange** - John Disney Professor of Archaeology Cyprian Broodbank - 1982-09-02

Ranked societies are characterized by disparities in personal status that are often accompanied by the concentration of power and authority in the hands of a few dominant individuals. They stand between the states and the relative simplicity of most hunter-gatherer groups and early agriculturalists. In some places and times they represented relatively brief phases of transition to more complex forms of organization; in others they existed as stable forms of adaptation for thousands of years. They are thus of great interest for archaeologists seeking to understand the dynamics of cultural evolution.

**Cme Vulnerability, The: The Impact Of Negative Oil Futures Trading** - George Xianzhi Yuan - 2020-10-23

In 2020, the global lockdowns caused by the COVID-19, or coronavirus, pandemic had resulted in a sharp drop in demand for crude oil. This impact was so severe that on April 8, 2020, a proposal to update the Chicago Mercantile Exchange Holdings Inc. (CME) trading rule to permit negative prices was applied to CME's WTI Oil futures contracts; this led to a novel phenomenon in which the closing clearing price of WTI Oil May future was $-37.63/barrel based on fewer volume in the last three minutes, reflecting less than 0.2% of the total trading contracts volume on April 20, 2020. This occurrence of negative closing clearing price for CME's WTI Oil futures trading, cannot be explained simply by just the principle of supply and demand; instead, it highlights vulnerabilities caused by CME's allowance of negative price trading (based on its trading platform), a decision which brings potential and fundamental challenges to the global financial system. This event challenges not just our basic concepts of 'value' and trading 'price' of commodities and goods that underline our understanding of the framework for the invisible hand and general equilibrium theory in economics established by a few generations of scholars since Adam Smith in 1776 for market economies, but also have wider implications on the fundamentals that underpin our ideas of value and labor in the organization, activity, and behavior of
